

RAHUL PALANISAMY

Senior QA Automation Engineer | Selenium WebDriver & Core Java | REST API Testing (RestAssured) | BDD Cucumber | CI/CD (Jenkins, Maven)

Chennai, India | +91 9363552080 | p.rahulshaan@gmail.com

PROFESSIONAL SUMMARY

Senior QA Automation Engineer with 7.9 years of experience designing, building, and executing manual and automated test frameworks across Investment Banking, Retail Banking, and E-Commerce domains. Expert in Selenium WebDriver, Core Java, Cucumber BDD, TestNG, and the Page Object Model (POM), with hands-on experience in REST API test automation (RestAssured, Postman), backend/database validation using SQL, and CI/CD pipeline integration with Jenkins and Maven. Skilled in SDLC/STLC, test planning, Requirement Traceability Matrix (RTM), defect lifecycle management (JIRA), and Agile/Scrum delivery. Recognized for improving test coverage, reducing regression cycle time, and strengthening release quality across enterprise client engagements.

CORE COMPETENCIES

Test Automation: Selenium WebDriver, Cucumber BDD, TestNG, Page Object Model (POM), Data-Driven Testing, Hybrid Framework Design

Programming: Core Java, OOPs Concepts

API Testing: RestAssured, Postman, REST API Automation, JSON Validation

CI/CD & Build Tools: Jenkins CI/CD, Maven, Git

Database: SQL, MySQL, Backend Data Validation

Testing Types: Functional, Regression, Smoke, Integration, System, UAT Support

Process & Methodology: Agile, Scrum, SDLC, STLC, BDD, RTM, Defect Lifecycle Management

Tools & Documentation: JIRA, Confluence, Excel, Test Case Design, Test Data Management

Domains: Investment Banking, Retail Banking, E-Commerce, Field Service Management

PROFESSIONAL EXPERIENCE

Senior QA Automation Engineer | Lance Soft Engineering

Dec 2022 – Present

Mercury Plus | Client: Suntra | Domain: Investment Banking

Jan 2024 – Present

Technologies: Selenium WebDriver, Core Java, Cucumber BDD, Maven, REST API, Git, JIRA, SQL

- Automated regression and functional test scenarios using Selenium WebDriver with Cucumber BDD, cutting manual regression effort.
- Designed reusable Cucumber step definitions, hooks, Scenario Outlines, and Examples tables to validate multiple data combinations, improving test data coverage across trade and settlement workflows.
- Implemented the Page Object Model (POM) design pattern, reducing script maintenance effort and improving reusability across test suites.
- Logged and tracked defects per release cycle via JIRA, collaborating with developers to achieve a first-time-fix rate.
- Integrated Cucumber test suites with Jenkins CI/CD for continuous execution after every scheduled build, enabling faster defect detection pre-release.
- Collaborated in daily Agile stand-ups, sprint planning, and retrospectives to align testing priorities with development velocity.

OSB – OneSavings Bank | Domain: Retail Banking

Dec 2022 – Jan 2024

Technologies: Core Java, Selenium WebDriver, TestNG, Maven, REST API, JIRA

- Designed and executed automated test scripts using Selenium WebDriver with TestNG, validating savings, personal loan, debit, and credit card workflows across region-based databases.
- Built a scalable POM + TestNG framework that increased automated regression coverage.
- Owned end-to-end test lifecycle — test case design, peer review, test data preparation, execution, and defect reporting — for release cycles spanning multiple banking modules.
- Generated detailed execution reports via Maven and escalated critical defects through JIRA to meet release SLAs.

QA Analyst | Atlas Systems

Jul 2017 – Sep 2021

Global Craft Access System (GCAS) | Client: Workiz | Domain: E-Commerce

Jul 2019 – Sep 2021

Technologies: Selenium WebDriver, Core Java, REST API, TestNG, Maven, JIRA

- Performed system and integration testing for a field-service dispatch platform covering job dispatch, billing, time reporting, and facility assignment workflows.
- Identified and automated high-priority test scenarios using Selenium WebDriver with POM and TestNG, reducing release-cycle test execution time.
- Tracked and reported defects via JIRA; partnered with developers for timely resolution and regression verification.
- Delivered testing updates in daily Agile status meetings within a time-sensitive delivery environment.

CEMEX | Domain: E-Commerce

Jul 2017 – Jul 2019

Technologies: JIRA, Excel, Agile Methodology, Confluence, SQL

- Analysed Business Requirement Documents (BRD) and led requirement clarification sessions with Business Analysts and stakeholders.
- Authored the Requirement Traceability Matrix (RTM) covering functional modules to ensure complete test coverage across releases.
- Executed Smoke, Functional, Integration, System, and Regression Testing for an internal procurement and supplier-negotiation platform.
- Verified role-based access control and performed UI-to-database data validation using SQL.
- Logged and tracked defects via JIRA, coordinating fixes with developers and reducing reopened-defect through regression retesting.

EDUCATION

Bachelor of Engineering (B.E.) – Electronics & Communication Engineering (ECE)
GRT Institute of Engineering and Technology | 2016
